THESSE tables are intended to be used in connection with college texts on the mathematics of investment and finance. Bankers, engineers, and actuaries will also find them of service in compound interest calculations.

Fourteen tables of values of compound interest functions are given, eight of which are expressed in natural numbers and six in logarithms. The natural numbers are given to eight and the logarithms to seven places of decimals. They are given for 100 years or periods and for the following sixteen rates of interest: 1% , $1\frac{1}{4}\%$, $1\frac{1}{2}\%$, $1\frac{3}{4}\%$, 2% , $2\frac{1}{4}\%$, $2\frac{1}{2}\%$, $2\frac{3}{4}\%$, 3% , $3\frac{1}{2}\%$, 4% , $4\frac{1}{2}\%$, 5% , $5\frac{1}{2}\%$, 6% , 7% . These rates will be found to cover most of the financial transactions occurring in practice.

The auxiliary tables VI, VII, VIII, IX, X, XI, will be found very useful in connection with calculations involving frequent interest conversions and installment payments.

The logarithmic tables are designed to facilitate the work of computation where arithmometers are not available; they may also be employed to familiarize the student with the use of logarithms.
